

With a more restricting deflection criteria, and a three-level above ground parking garage requiring vehicular restraint and pedestrian fall protection, this high-rise structure stands out against the surrounding buildings.

We combined bollards, embeds, vertical and face-mounted supports to achieve the Design Team restrictive requirement.

Spanning for more than two years and requiring a lot of coordination and fine tuning with other trades, we finished it with the rewarding sensation of a well-done job.

PROJECT: Pentagon City Centre
(June 2019) Arlington, VA

CLIENT: The Withing Turner Company

ARCHITECT: WDG Architecture, LLC

OWNER: Kimco Realty Corporation
